Annexure -1

Server Specifications & details
Quantity - 1

Components	Description
Processor	Dual 20-core intel Xeon e5-2698 v4 2.2 Ghz or better
System Memory	512 GB DDR4
GPU	8 x GPUs (Tesla V100 SXM2)
Performance	On or above 1 Peta-FLOPS mix precision
GPU Memory	256 GB (8X32) total system
CUDA Cores	Approx. 5000 per GPU
Tensor Cores	Approx. 600 per GPU
Power Requirements	4KW or less with hot-plug & redundant power supply
Rack space	4U or less
Storage	4X 1.92 TB SSD RAID 0 or better
System Network	Dual 10 GbE Up to 4 IB EDR
GPU communications protocol	NVLink 2.0/ configured in hybrid cube-mesh NVLink network topology
OS Support	Red Hat Enterprise Linux /CentOS/ Ubuntu Linux
USB Port	2
RS232 Serial Port	1
VGA Port	1
Ethernet (RJ45) Ports	2
Operating Temperature Range	Normal AC temperature
Number of Simultaneous Users (Minimum)	64
Software Support (Directly from OEM with updates & upgrades). Support portal should be enabled for min. 3 users. Partner has to help build first model on-site with limited data-set. OEM Letter head should state type of support during 3 years with SLA.	CUDA toolkit CUDA tuned Neural Network (cuDNN) Primitives TensorRT Inference Engine. DeepStream SDK Video Analytics CUDA tuned BLAS CUDA tuned Sparse Matrix Operations (cuSPARSE) Multi-GPU Communications (NCCL), Kubernetes TensorFlow , caffe , pytorch, Theano, Keras, caffe2, CNTK
Time to Train a ResNet-50 model on 1.28Million images	Not more than 150 minutes. Published on respective OEMs website with quoted server model.
Time to Train a SSD model on 118K images.	Not more than 30 minutes. Published on respective OEMs website with quoted server model.
Time to train a GNMT model on 4.5M sentence pairs of English-German.	Not more than 20 minutes. Published on respective OEMs website with quoted server model.
Containers	The solution should have ready to use container for different Big-Data, ML, DL stack optimized for given architecture and configured to utilize GPUs fully.

Components	Description
Scalability & Cluster software	1. System should be scalable with multi node cluster. Software support & cluster tools to be supplied along with product. The system should also be qualified with min. 3 storage & 3 network vendors in cluster mode. Reference architecture for the same should be available on OEM website.
	2. Architecture should be tested and verified by OEM jointly and proof for the same to be submitted on OEM letter head. The testing should also prove that architecture (combination of Server/storage/network) is designed jointly to get best optimized performance, deployment to be made quickly and have minimum overheads.
	3. The solution provided should be highly scalable and should have reference architecture available for testing.
	4. The proposed solution should be cloud scalable in future. The solutions should be integrable with different storage vendors (min. 3)
Certifications	1. The solution given for ML/DL workload should be certified by the respective OEM vendor to act as verified, tightly coupled architecture. Public document for the same should be available. All the supporting document for the same should be submitted along with bid.
Warranty & Support	1. 3 Years standard
	2. The solution should be supported for 3 years including all spare parts, software stack, DL frameworks and contract for the same should be with OEM directly.
	3. During the warranty all the updates and upgrades for software should be given for free.
Training	1. Bidder has to provide 5 days training on system administration, Deep learning & Machine learning, Frameworks, Practical's with few popular modules & Inferencing.
	2. Bidder has to provide 2 days training on Deep learning & Machine learning, Frameworks, Practical's with few popular modules & Inferencing every 6 months for next 2 years.
Manufacturer Authorization letter	Bidder should be an authorization reseller of the Original equipment manufacturer and should provide an authorization letter from OEM
